Food storage is a topic not many people think about. If they do think about it, it only goes as far as storing the monthly groceries, which we all know about; any place dark, cool and dry for long term food while the rest goes in the fridge. Ever wondered what would happen if your electricity was cut; the food in the fridge going bad, food kept in groceries going bad? Ever wondered what would happen if a disaster struck; leaving your house in shambles, no home and no food? Ever wondered how you would survive if there was no more produce? If you are cautious and aware, always wanting to be prepared, and want to find a place to store your food for the long haul, for any and all eventuality then SHTF: 30 tips to help you build a root cellar with food storage is the book you need. This book looks at the perspective of the survivalist, and what would happen if shit hit the fan. It looks at situations where the stored food would become necessary. It looks at the misconceptions regarding such situations. It then looks specifically at the different kinds of food storage facilities, focusing on root cellars and the advantages of different kinds of root cellars for the storage of food. It looks at the different kinds of root cellars available, depending on what you are looking for and finally for those who want to build a root cellar themselves, we have 30 tips to help you build your very own cellar with minimum fuss and budget. Even if you are not a survivalist, and are just interested in making your own food storage, there is something here for you as well. This book contains the following information: Introduction Chapter 1- Food storage Chapter 2- Root cellars: Types of root cellars Chapter 3- 15 general tips for

building root cellars Chapter 4- Important tips for each type of root cellar Conclusion
