

Terrain Analysis of Syria and Lebanon

Terrain Analysis of Syria and Lebanon provides an in-depth synopsis of essential geographic information for both countries, utilizing the terrain analysis reports found on the verso side of the 1:200,000 scale Russian military-topographic map series. These reports draw on detailed on-site surveys and long-term observations. Each report, 47 in all, analyses the terrain and relevant geography of a specific portion of Syria and/or Lebanon. The reports themselves are structured into six parts, describing populated places; local roads and transportation networks; topography and soils; hydrology; vegetation, and climate. Following this description for each area is a small-scale overview topographic map of the region under examination, as well as a soil map. Terrain Analysis of Syria and Lebanon is the ideal resource for peacekeeping forces, humanitarian organizations, embassy personnel, regional analysts, reconstruction specialists, local authorities, geographers and earth scientists, and the international business community.
